Permanent UNIMARC Committee, 2022 July 27

- Approval of the Agenda
- Report from the 32nd PUC Annual Meeting
  - Florence on the numismatic resources proposals from BnF: based on BnF’s own work integrating such materials into their collections; 3D objects, coins, medals, dies, 117; material designation, notes; domain ontology has been developed, reflected in the proposals; adding to existing fields for weights, new relator codes (mints); PUC still working on these proposals but acceptable in general principle, to be finalized later in 2022, harmonizing with existing U/B; adding examples, then U/A for Work and Expression entities (there has been FRBRoo work on numismatic resources by Princeton; not considered in LRM; CDOC-CRM is broader for such objects; LRMoo just beginning; deserves further work before integration into UNIMARC); numismatic collections could be the subject of a new set of guidelines; we will share with other metadata sections for suggestions
    - 13 proposals considered during the recent meetings
  - Welcome and Introduction of New Members
    - Maria Aslanidi is new member (on Zoom), music specialist
- URIs discussion paper presentation
  - French UNIMARC committee paper adds new kinds of subfields with capital letters that can contain only URIs; this would be a new development in MARC subfielding and questions remain about how systems will be able to deal with these characters; currently URIs are in subfield $u$ but this cannot be generalized more due to current subfield definitions; subfield $S3$ was suggested to supplement
- UNIMARC Namespaces Project Report
  - In 2016, only U/B was in registry, U/A is currently just a spreadsheet; we need someone knowledgeable about Namespace to do remaining work; LIDATEC has helped but we still await final guidelines about Namespace maintenance; Spain, Iran, Branka are the members of the subgroup creating the spreadsheets
- Reports on ACOS and other RG activities
  - ISBD for Manifestation RG, Mirna serving as mentor for UNIMARC, Gordon keeping us informed about ISBD RG; Mirna and Gordon have already identified
to few UNIMARC elements missing for ISBD/M, PUC work will begin in earnest following availability of ISBD/M
  o Harmonizing definitions and scope notes of U/A and U/B by end of 2022
  o Branka working on PUC’s website and its missing documents after move to new IFLA website, by end of 2022
  o Vincent reports from BnF proposal to CoS to fully integrate the IFLA metadata standards; both organizational and strategic, waiting for feedback from metadata groups
- Any other Business
  o PUC will have another business meeting probably in September 2022
  o 2023 is IFLA election year; discussions with BnF about possibility of taking over chair of PUC; unlike most IFLA units, PUC really serves other librarians rather than end users
  o Accessibility data work being done in W3C, involving UNIMARC crosswalk; Work and Expression level accessibility mostly covered already in UNIMARC
