Output name

Creating a Snapshot of Global Open Science Efforts

Output type

(Mid-term and other event (virtual) (not WLIC))

Output description

We hope to achieve the following outputs:

- A document/webpage that describes open science efforts ("snapshots") by country as seen through the eyes of our committee members (first) and other volunteers (as needed/recruited). These will provide insights for libraries wishing to integrate open science into main library functions (management, organization, services, among others) and provide a roadmap for how libraries could perform open science actions from the practice of librarianship.

- A virtual event, likely during Open Access Week 2024, that features a "global open science conversation" that builds on the country snapshots and roadmap described above.

Thematic tags

(Access)   (Open initiatives)   (Professional development)   (Advocacy)   (Sustainability)

Target Group?

(A Library/Information Community)

Output context

- OS is a global concern (e.g. UNESCO guidelines) and this output will help librarians around the world understand and take action on OS with deeper understanding of the global issues

- It will include concrete actions that librarians can use as of examples, including through our work with serials and other continuing resources

- Supports a holistic view of open science across many types of scholarly communication (serials, books, OER, data, etc)

Target Group Outcome

Example: This two phase project will highlight concrete actions and bring a practical approach for libraries that are uncertain about how to grow their exsiting open science efforts or start their open science initiatives.

Report on impact

Steady progress over the next 18 months with new country snapshots shared at approximately three every six months. We expect to be able to hold an online event for Open Access Week in October 2024.
